

innode

In Nodes We Trust!

**We are the link
between technology
and your projects!**

From our *experience, dedication, creativity and passion* for information, we lead your company in optimizing the necessary procedures for the data of your projects to gain value.

We guide the management of project information to facilitate the interaction between the engineering, construction and customer processes, using quality standards according to the new challenges in the industry for the implementation of emerging technologies.

We work proactively to minimize errors in the operation, optimize processes and generate decision-making tools, seeking effective digital transformation that generates return on investment and reduction of time.

SERVICES

TECHNICAL

- ⌘ Configuration and administration of engineering tools.
- ⌘ Integration of information systems.
- ⌘ Process automation.
- ⌘ Trainings and workshops.
- ⌘ Knowledge management.

INFORMATION INTEGRITY

- ⌘ Implementation of reliable and comprehensive engineering models in the project life cycle, using standards and methodologies for information management.
